Of course, you can add vocals or other instruments and you can always mix the track once it's finished. Orinj does a great job at pre-loading a large number of sample files. Each of the hundred and fifty track sections includes different MIDI samples. Furthermore, you can edit each one of them to provide them with a unique sound. The pre-loaded drum loops are also quite good. You can use these loops to create a complete song or edit them to create your own drum track. Each one of them is made using the Apple's Logic Audio Production software. You can change the pitch and volume of them and add different effects and effects. There are six different kits available. These kits are designed to give you all the necessary elements to create an entire song. These kits include different percussion samples and if you select a MIDI file, you can use it as a part of the track. Orinj has two different record modes. The first one is for beginners. You can simply record your voice and then play back the result. However, you can also take advantage of the professional mode. This mode allows you to record your voice and all the MIDI tracks at the same

time. There is also a built-in drum machine. You can record a complete drum track or play back one of the pre-loaded kits.
