There are two main variants of AutoCAD: AutoCAD LT, and AutoCAD 2017. AutoCAD 2017 runs on Windows, macOS, and Linux computers, and includes more advanced features. AutoCAD 2017 also introduced two new drafting and analysis applications, BIM 360° Design and BIM 360 Drafting. AutoCAD LT is available free of charge, while AutoCAD 2017 requires a monthly or annual subscription for the basic version. Some AutoCAD LT users buy a subscription to the latest version when it is released, while others only upgrade to the newest version of AutoCAD LT as it is released. In 2016, more than 81,000 companies were using AutoCAD for drafting purposes in the US alone. More than 6,000 of these users were in the government sector. AutoCAD LT was developed by Autodesk, and is considered the first commercial CAD package, developed at the start of the microcomputer revolution in the 1980s. It is available on a number of platforms, including PC, Windows, Mac, Linux, and Android. The majority of users are running AutoCAD LT on a PC running Windows. The first AutoCAD LT license was released in 1986, though the software was not released for public download until December 1982. Developed and marketed by Autodesk, AutoCAD was first released in December 1982 as a desktop app running on microcomputers with internal graphics controllers. Before AutoCAD was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. AutoCAD is also available as mobile and web apps. There are two main variants of AutoCAD: AutoCAD LT, and AutoCAD 2017. === VBA === Autocad does not include a VBA compiler; it is a macro and data language used for scripting its software. It has a compiler for Microsoft Visual Basic. The concept of programming the macro language in VBA for users of Microsoft Excel is the similar to the use of Java and Jscript to develop JavaScripts for Microsoft's Internet Explorer browser. VBA must be "registered" by the company using it to connect to Autocad, so to work properly, VBA must be installed on a user's machine, and the Autocad executable file must be installed on a default directory (typically the c:\program files\Autodesk\AutoCAD or c:\program files\Autodesk\AutoCAD LT directory). Note that Autocad 2008 has a built-in VBA compiler, which replaces the need for third-party VBA compilers. The VBA programming language can be used for many things, and is a powerful tool in AutoCAD. Its most powerful feature is allowing the use of AutoCAD and other software through customized scripts. VBA also has a subset of the AutoLISP capabilities, allowing for the creation of VBA scripts from AutoLISP. ==.NET == Autocad does not include a .NET compiler; it is a macro and data language used for scripting its software.
