

LuaCOM Plugin Crack

This library is a bridge that allow you to communicate with Lua's COM interface, in this case, the LuaCOM module. It provides a set of commands and classes that allow you to register COM objects, make calls to them, etc. It also supports a Lua COM wrapper, which allows you to manipulate COM objects from your Lua scripts. Cracked LuaCOM Plugin With Keygen Installation: Because the current installation format is ZIP, simply unzip it to the plugin directory (see the "luaibs" link in the Download Links section). The "All" option should be selected. You will be asked which version you want to install. If you want the latest version, choose "all". If you want the latest stable version, choose "stable". Your plugin should be installed in the plugins folder. You can test it in Lua by calling the "LuaCOM" command (example: lua luaibs.dll LuaCOM command: "Hello world") If you have the PowerSploit Framework installed, you can use lua.LoadAllPackages("powersploit") to load all of the packages included with it. How to register a COM object in LuaCOM: lua > require "luaibs" > require "luaibs.dll.LuaCOM" How to call a function or property from a COM object: lua > COM.Register("MyComObject", "function ComObjectMethod(varargs) print(varargs) end", "function ComObjectGetProperty(varargs) return varargs.property1, varargs.property2 end", "function ComObjectSetProperty(varargs) varargs.property1 = varargs.property2 end") Lua COM Object Example: COM.Register("MyComObject", "function ComObjectMethod(varargs) print(varargs) end", "function ComObjectGetProperty(varargs) return varargs.property1, varargs.property2 end", "function ComObjectSetProperty(varargs) varargs.property1 = varargs.property2 end") If you have the PowerSploit Framework installed, you can use lua.LoadAllPackages("powersploit") to load all of the packages included with it. Hello World Example: COM.Register("MyComObject", "function ComObjectMethod(varargs) print(varargs) end", "

LuaCOM Plugin Crack+ With Registration Code

Compilation 1. Generate doxygen documentation from the.hpp file. "" make doxygen "" 2. Check for errors "" make check "" 3. Install into the plugins directory "" make install "" Id6a3396d6

LuaCOM Plugin Crack + Full Product Key

This is the Indigo Rose plugin format plugin version of the LuaCOM library. The LuaCOM library is a tool for interfacing with COM (ActiveX) objects from your projects. Basically, LuaCOM allows you to access COM (a.k.a. ActiveX objects) objects from your projects. It also allows you to expose COM interfaces from your applications. This means that you can do things like creating and manipulating Microsoft Word documents and many other programs and technologies that expose COM interfaces. What's New In LuaCOM Plugin?

This is an Indigo Rose plugin format plugin version of the LuaCOM library. Basically, LuaCOM allows you to access COM (a.k.a. ActiveX objects) objects from your projects. It also allows you to expose COM interfaces from your applications. This means that you can do things like creating and manipulating Microsoft Word documents and many other programs and technologies that expose COM interfaces. Usage: Add this to your plugins.txt and then run this plugin: "c:\scripts\luaom.lua" You will be asked for the id of the plugin and the LuaCOM section for the plugin. Put the values in your plugins.txt and then you can run this plugin. Example: "c:\scripts\luaom.lua" "C:\lua_misc\plugin_luaom.txt" This will return a LuaCOM object that is the accessor of the Plugin's LuaCOM interface and a LuaCOM function for the plugin's LuaCOM interface. The LuaCOM library exposes many different objects. The current LuaCOM versions of this plugin supports the following: MSWord.Application: The LuaCOM reference to the MSWord application object. MSWord.Sheet: The LuaCOM reference to the MSWord sheet object. MSWord.Table: The LuaCOM reference to the MSWord table object. MSWord.Chart: The LuaCOM reference to the MSWord chart object. MSWord.Document: The LuaCOM reference to the MSWord document object. MSWord.Drawing: The LuaCOM reference to the MSWord drawing object. MSWord.Font: The LuaCOM reference to the MSWord font object. MSWord.Hyperlink: The LuaCOM reference to the MSWord hyperlink object. MSWord.Mail: The LuaCOM reference to the MSWord mail object. MSWord.Paragraph: The LuaCOM reference to the MSWord paragraph object. MSWord.Page: The LuaCOM reference to the MSWord page object. &n

System Requirements:
