Hourglass Portable Crack+ Free Download [Mac/Win] (Latest)

Hourglass Portable is a handy timer that you can use to remind you of whatever you want. Whether it is time to leave for school, be late for a friend or simply to be on time, Hourglass Portable will give you that extra push you need to be on time. Starting the timer: - All the timer's settings are stored within the same folder that the utility is located in. If the application is located on a removable flash drive, you do not need to install it on your hard drive and all the settings will be kept together.- You simply need to type the values you want to display or the interval you want to use: hours, minutes and seconds.- To start the timer, just double-click on the executable file of the utility, and you will be presented with its main screen; you can either directly type the desired values or simply select the appropriate buttons and then press Enter. The application's GUI allows you to choose the day and the month you want to display (year is also supported); the time intervals available are set between one and two days. Be careful with the format used: if you type a value like 5h 8m or 1w 4d 1h, the timer does not start (the time to display is not set).- The GUI comes with three buttons: "Stop", "Reset", and "Continue". The first button will stop the timer once it has started. The second will reset the time displayed to its initial value, and the third will let you continue to work (with a new timer). To help you better, Hourglass Portable also offers several help pages. - General help: "Question/Answer" and "Help". - Help for when the timer has started: "Start/Stop" and "Reset". - Help for when the timer has stopped: "Reset" and "Continue". - Help for changing the color: "Options" and "Change to/from". - Help for the application's options: "Options" (graphical version). To make the most of the timer, you can set it to repeat and set its colors to suit you. Once you have chosen your colors, you can choose one of the three options for the beep you want to play when the timer elapses: normal, soft, or muted. You can also turn the timer off from the GUI or from any other window of the application. Supported formats: Numeric only: h/m/s. Time only

Hourglass Portable Free Download Options: Platform: Windows | Linux Language: English Version: Free File Size: 14mb Direct Link: Advertisement Mac Monitoring Description EagleEye is a small yet powerful Mac monitoring software that is designed to track the temperature, CPU utilization, RAM usage, hard drive activity and many other activities on

your Mac with a timer. A small application, it adds a dashboard type of view that appears on the top of the screen. It is designed to run in the background and notify you when certain events occur. Monitoring and reporting activities with EagleEye The interface is simple and easy to follow, making it ideal for those who want to keep tabs on their Mac activities. Another feature is that the application can have different dashboards that will show you information about what's happening within your Mac computer. It makes things easy, in particular, for those who need to keep a closer eye on their Mac and do not want to open the app to check its status and see how it is performing. A large collection of dashboards that you can use. You can create a few of them yourself, or you can download them from the community-based software development website and install them at your own convenience. The EagleEye interface is pretty straightforward and you can simply monitor what's happening with the Mac. These are basically the main screen shots. Monitoring time with EagleEye The app can track several common activities and can even show you detailed information about them. These activities include: CPU utilization - The percentage of CPU usage will determine the performance of your Mac. This is pretty simple to understand. Disk activity - This is the percentage of the hard drive space that is being used. This indicates how much data is being saved or stored. Network traffic - If you need to know how much data has been transferred over the Internet, this will be an essential measurement to get. Displays - This shows how much of the
